Genetec Clearance camera registry streamlines public/private collaboration, and helps agencies close cases faster

New participant registration process improves collaboration to help communities fight crime.

MONTRÉAL, May 4th, 2021—[Genetec Inc.](#) (“Genetec”), a leading technology provider of unified security, public safety, operations, and business intelligence solutions today announced an update to its camera registry module for [Genetec Clearance](#)[™] (Clearance) a digital evidence management system that facilitates collaboration between public safety agencies, corporate security departments, businesses, and the public.

Video evidence is an invaluable tool to help investigators review events, assist the public, and solve crimes. However, the methods used to retrieve recordings from privately owned cameras is cumbersome and time-consuming, as it relies on officers manually collecting video from the scene. The camera registry module for Clearance offers an entirely digital and automated experience to facilitate the process and provides a new avenue for law enforcement to work closer with residents and businesses in their community.

“Genetec Clearance[™] is now our overall case file with everything in it, including all of our evidence and case-related documentation,” said Captain Mike Bell, Identification Division Commander at the Galveston Sheriff’s Office in Texas. “Where we used to keep paper records, we now store everything digitally in Clearance—including crime scene photographs, patrol photos from cell phones, interviews, and all our reports and records. And using Clearance means that, when we have to work with case files for whatever reason, all of the data we need is right there at our fingertips.”

The module allows cities and agencies to create a digital public safety program where businesses, public institutions and residents can enroll to assist with investigations. Once participants have registered their cameras, detectives can rapidly locate cameras nearby investigations and request recordings to facilitate with evidence collection.

Recordings are provided voluntarily by participants and are sent back to the authorities through a secure web portal. Video exports from any camera system can be shared, so business owners and residents can continue to use their existing equipment without incurring any additional costs to participate in the program. Detectives can then review and preserve videos received from these requests directly from Clearance.

“Investigators are under a lot of pressure to solve cases. Our goal is to provide cities and public safety agencies technology to reduce time spent on mundane tasks and provide methods to collaborate more effectively with businesses and the public. We’re pleased to offer solutions like Genetec Clearance™ that can be used to build closer partnerships within communities and better leverage the full potential of evidence available to improve public safety,” said Erick Ceresato, Senior Product Group Manager at Genetec, Inc.
